

QUALITEK®

Rework Wands

RMA, No-Clean, Water-Soluble, No-Clean LT (Low Temperature)

DESCRIPTION

Marker style Rework Wands are pen like reservoirs for applying flux. The mechanical nature permits a localized, controlled application of flux for rework or adding components. The RMA, No-Clean, and No-Clean LT formulas are non-conductive, non-corrosive, and require no cleaning. The No-Clean LT is designed for low temperature soldering applications. The Water-Soluble Wand was developed for complete water cleanability and solubility of post soldering residues.

APPLICATION METHODS

By pressing the Rework Wand's tip against the point of concern, operator can apply the required amount of flux.

RESIDUE REMOVAL

The RMA, NO-CLEAN, and NO-CLEAN LT residues have sufficiently high surface insulation resistance value and generally need not be cleaned. If it is desired to clean off the residues, either a CFC substitute of saponifier based cleaning system can be used. The WATER SOLUBLE formula requires post soldering cleaning. Cleaning may be achieved with a 135°F water wash followed by a D.I. water rinse (cold cleaning optional).

PACKAGING & STORAGE

Rework Wands contain a minimum of 1/3 oz. of any particular flux. Recommended storage is at room temperature (<80°F) away from ignition sources.
